TYGERBERG CRICKET CLUB · PLAYER AUCTION, DRAW & DRAFT

DRAFT DAY

USER GUIDE

How to set up an event, run a live auction, a random draw or a captains' draft on the night, fix mistakes, and share the results.

CONTENTS

1 OVERVIEW — What Draft Day is, the three formats, the files

2 BEFORE THE EVENT — Player lists, loading them early, presets

3 THE SETUP WIZARD — Every setting, step by step

4 PRE-ROUNDS — Picks before the main event

5 THE AUCTION — Running players, bidding, the unsold round, tools for the night

6 RANDOM ALLOCATION — The draw format: no money, no bidding

7 CAPTAINS' DRAFT — Captains take turns choosing, no money

8 FIXING MISTAKES — Undo, editing players, roster fixes, the resets

9 RESULTS, EXPORTS AND SAVING — PDF, images, recap, sponsor, CSV, player history, saves

10 ON THE NIGHT — Rehearsal, a checklist and the keyboard shortcuts

01 OVERVIEW

Draft Day runs a club player draft in the browser. A setup wizard describes the event: any number of teams, optional pre-auction rounds, your own tiers and rules. Then players are shared out in one of three ways: by **auction** (teams bid against a budget), by **random allocation** (a fair, checkable draw) or by **captains' draft** (captains take turns choosing).

The shipped default is the TCC 6-a-side format: 6 teams, R10M each, 1 captain, 2 free former players and 5 bought at auction. Every number can be changed in the wizard and saved as a preset. One person drives the laptop; in an auction the room bids out loud.

Light or dark. The app is light by default. The ☾ button in the wizard's top bar and every screen's header switches everything to dark, the projector included; ☀ switches back. The choice is remembered on this computer.

HOW AN EVENT RUNS

1 · SETUP
The wizard: format, teams, rounds, tiers, rules, player lists. Launch.

2 · PRE-ROUNDS
Optional rounds where teams take turns picking.

3 · MAIN EVENT
Players are bought, drawn or picked until squads are full.

4 · RESULTS
Rosters PDF, images, cards and CSV.

In an auction, each player goes through one loop (the auctioneer drives the highlighted step):

Player comes up › Teams bid or pass › **Declare winner** › Sold, or into the unsold queue › Next player

HOW TO OPEN IT

No internet is needed at the venue: the fonts and the PDF library ship in `vendor/`.

BEST: SERVE THE FOLDER
Open `index.html` from a local server (VS Code Live Server, or any web host). Everything works, including logos in the PDF and cards.

QUICK: DOUBLE-CLICK
Open `index.html` straight from the folder. Everything works, but the browser hides logo files from the PDF, which shows initials badges instead. Uploaded logos still appear.

WHAT'S IN THE FOLDER

FILE	WHAT IT DOES	EDIT IT?
`index.html`	The page itself. Open this to run Draft Day	Rarely
`event.config.js`	The default event the wizard opens with: format, teams, rounds, tiers, bidding, outputs and sponsor. Every setting is explained in the file	Optional; the wizard and presets cover most needs
`styles.css`	All the styling	For look-and-feel changes
`js/`	The app, one file per area: wizard, pre-rounds and draft, auction, wheel, random draw, rosters, history, exports (PDF, images, CSV), saving and undo, admin, timer and break, keys and clicks, projector. `index.html` loads them in order	For changes to how it works
`logos/`	Team logo images (256 px)	When logos change
`tests/`	Automated checks for developers; the app doesn't need them	Developers only
`vendor/`	Fonts and the PDF library, so nothing loads from the internet	No

02 BEFORE THE EVENT

You need the event settings (done in the wizard) and one player list per round: one for each pre-round, plus the main pool. Lists can be CSV files or pasted text, and can be loaded in the wizard before launch.

PLAYER CSVS

Every list uses the same three columns, separated by commas, or by tabs when copied straight from a spreadsheet. A header row starting with `Name` is optional.

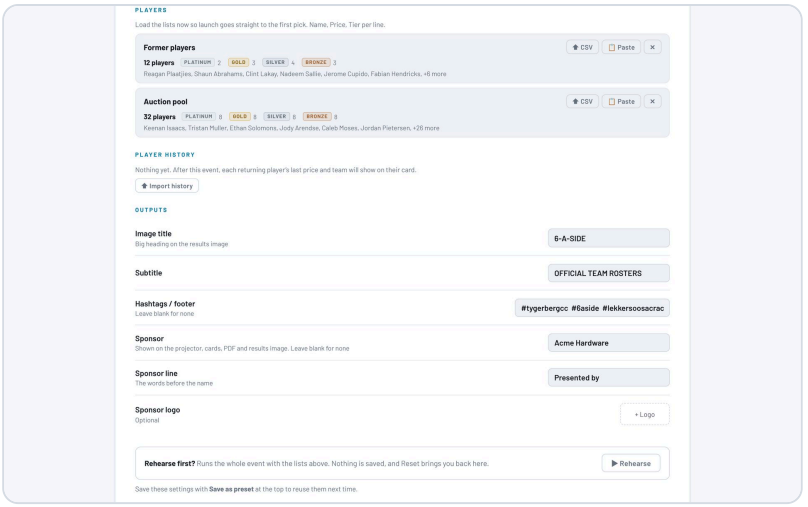

```
Name,Price,Tier
Keenan Isaacs,500000,Platinum
Ethan Solomons,R200000,Gold
"Adonis, Dylan",50000,silver
Caleb Moses,50000,
```

COLUMN	RULES
Name	Required. A name already in that list (any case) is skipped as a duplicate. Wrap names that contain commas in quotes
Price	Optional (0 if left out). Currency symbols, spaces and commas are ignored, and `250k` or `1.2m` work. This is the base price, ignored in a draw or a draft. A line of just `Name, Tier` also works
Tier	Must match one of the event's tier names, in any case. Anything else becomes no tier, and the load message names the unknown tier. With no tiers set, the column is ignored

- **Load lists in the wizard** (below), or on each screen after launch: a pre-round's list on that round's screen, the main pool on the auction, draw or draft screen. In a free round the price is ignored; in a "listed price" round it comes off the picking team's budget.
- 📋 **Paste a list** sits next to every CSV box: paste names from a message or a spreadsheet instead of making a file. In an auction you can also add players one at a time.
- Captains can be left out of the pool. If a captain's name is in it, they're kept out of the draw.

LOAD THE LISTS BEFORE LAUNCH

On the wizard's Review step, **Players** has a row for each pre-round and for the main pool, each with ⬆ **CSV**, 📋 **Paste** and ✕ to clear. The preview shows the number of players, the split by tier, the first few names, and any tier name that doesn't match. The lists are remembered on this computer and loaded at launch, so the night starts at the first pick.

Review, lower half. Two lists loaded with their tier split, the Outputs settings with a sponsor, and Rehearse.

PRESETS: SET UP ONCE, REUSE

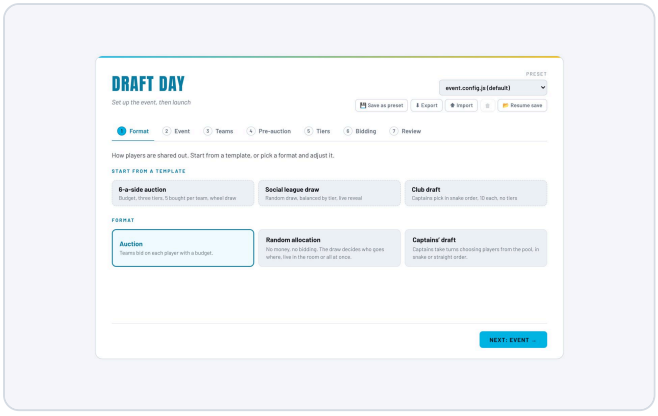

The wizard's top bar holds presets, so you don't rebuild an event each time.

BUTTON	WHAT IT DOES
Preset list	Switch between `event.config.js` (the default) and any saved preset
💾 **Save as preset**	Store the current settings under a name, in this browser
⬇ **Export** / ⬆ **Import**	Download the settings as a JSON file, or load one. Use this to move a setup to another computer
🗑	Delete the selected preset
📂 **Resume save**	Reopen a Save State file mid-event

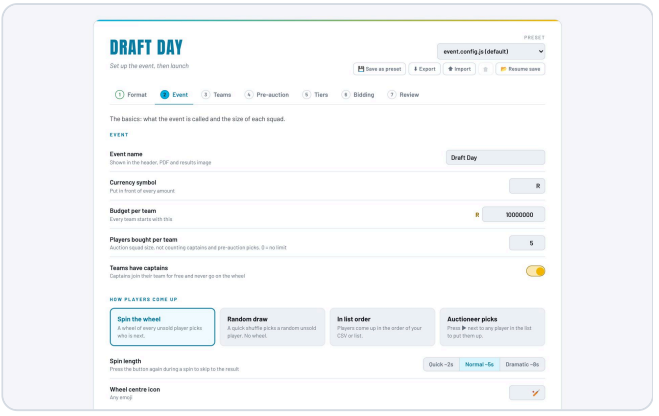

> **GOOD TO KNOW** Wizard edits are remembered in this browser automatically until `event.config.js` changes; then the file wins. Presets live in the browser's storage, so clearing site data removes them. Export the ones you care about.

03 THE SETUP WIZARD

Seven steps define the whole event (six for a draw or a draft, which have no Bidding step). Jump between steps with the tabs at the top; a red **!** on a tab means something there blocks launch. Press **Launch** on the last step.

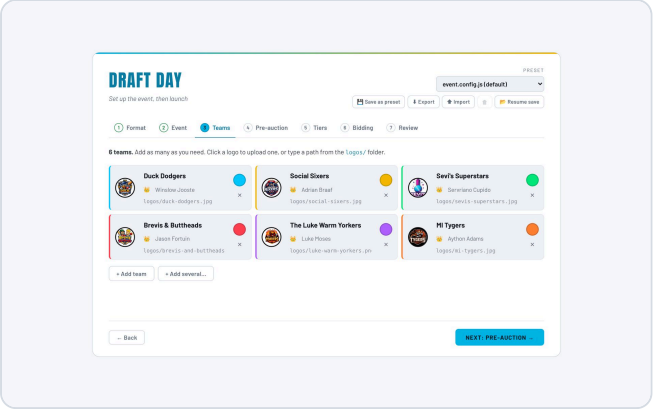

Step 1, Format. Three templates to start from, and the three formats.

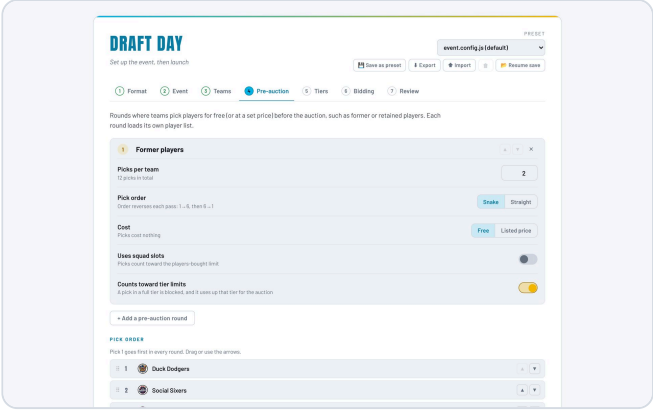

Step 2, Event. Name, money, squad size, captains and how players come up.

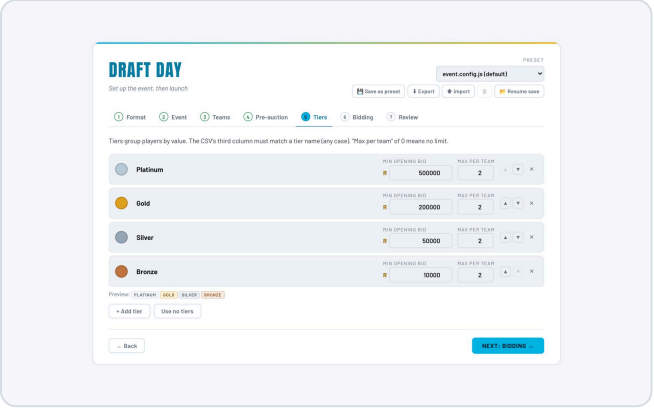

STEP	WHAT YOU SET	NOTES
1 Format	Auction, random allocation or captains' draft, plus that format's own settings (draw balance and reveal, or draft pick order). Or start from a template: **6-a-side auction**, **Social league draw** or **Club draft**	A template replaces the format, rounds, tiers and rules; your teams and event name stay
2 Event	Name; for an auction the currency and budget per team; players per team (bought, drawn or drafted; 0 = no limit, at least 1 for a draft); captains on or off; for an auction how players come up, spin length and wheel icon	The name appears in the header, file names, PDF and images
3 Teams	Any number of teams (at least 2): name, captain, colour, logo	**+ Add team**, or **+ Add several…** to set a total. Click a logo to upload one, or type a path in `logos/`
4 Pre-rounds	Zero or more rounds: picks per team, snake or straight order, free or listed price (auction only), whether picks use squad slots and count toward tier limits	The tab reads Pre-auction, Pre-draw or Pre-draft. With no rounds, launch goes straight to the main event
5 Tiers	Any number of tiers: name, colour, minimum opening bid, max per team (0 = no limit). Or none at all	Tier names must match the lists' tier column
6 Bidding	Increment, enforce the increment, pre-fill bid boxes, purse reserve, bids in thousands, auto-sell, timer and whether a bid restarts it, the unsold queue and its price cut	Auction only. Also changeable mid-event in Admin
7 Review	A summary of every step, warnings, errors and the pick order. **Players**: load or paste each list. **Outputs**: results-image title, subtitle, hashtags and a sponsor. ▶ **Rehearse**: a practice run (chapter 10)	**Launch** is here

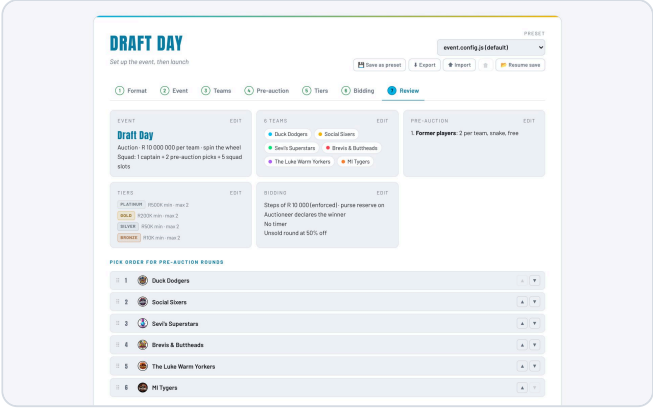

Step 3, Teams. A card per team: logo, name, captain, colour.

Step 4, Pre-rounds. Each round's rules.

Step 5, Tiers. Colour, name, minimum bid and limit per team.

Step 7, Review. Everything at a glance, then the pick order.

HOW PLAYERS COME UP (AUCTION)

MODE	THE BIG BUTTON	WHAT HAPPENS
Spin the wheel	SPIN THE WHEEL	A wheel of every player still in the pool picks who's next. Each slice's rim shows its tier colour
Random draw	DRAW A PLAYER	A short shuffle of names lands on a random player. No wheel
In list order	NEXT PLAYER	The next player in the list, top to bottom. The stage shows who's up next
Auctioneer picks	(disabled)	Press ▶ beside any player in the list to put them up

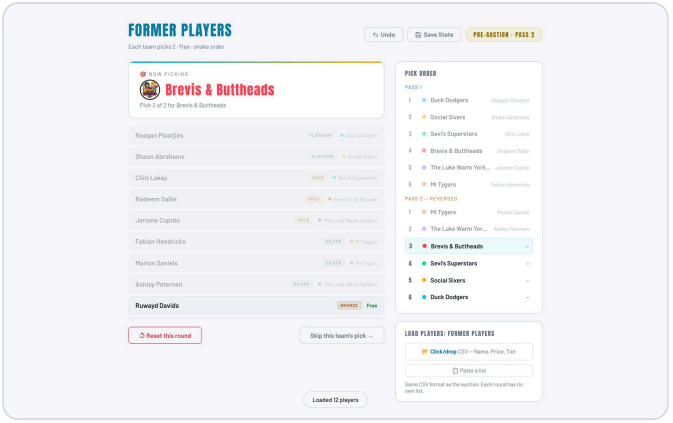

WHAT BLOCKS LAUNCH

- Fewer than 2 teams, two teams with the same name, or two teams with the same captain.
- A tier with no name, or two tiers with the same name.
- A budget of zero (auction only), or a squad size of zero in a draft.

Warnings don't block launch: teams with no captain, a tier minimum above the whole budget, tier limits adding up to fewer than the squad size, or a team or tier colour so pale it would be hard to see on the light screens and the PDF. (Pale colours are darkened automatically where they're used as text, but a stronger colour still looks better.)

04 PRE-ROUNDS

Each round set in the wizard runs here, in order, before the auction, draw or draft. A round has its own player list, and teams take turns picking in the wizard's pick order.

A pre-auction round in pass 2. The team on the clock, picked players greyed out, and the pick order grouped by pass.

1. **Load the round's list** with the box at the bottom right (click, or drag the file in), or 📋 **Paste a list**. Lists loaded in the wizard are already there.
2. **The "Now picking" card** names the team on the clock and which of its picks this is. Click a player to give them to that team.
3. **Unavailable players** show why in red: a full tier, a full squad, or a price the team can't afford. Picked players grey out with the team's name.
4. **The pick-order panel** groups turns by pass. In a snake round the second pass is marked "reversed".
5. **When the round is done**, a green banner offers **Next round**, or **Start auction** (**Start draw** for a random allocation; in a draft the draft itself is the last round). Picks can still be fixed after launch with Replace or Remove on the team's roster (chapter 8).

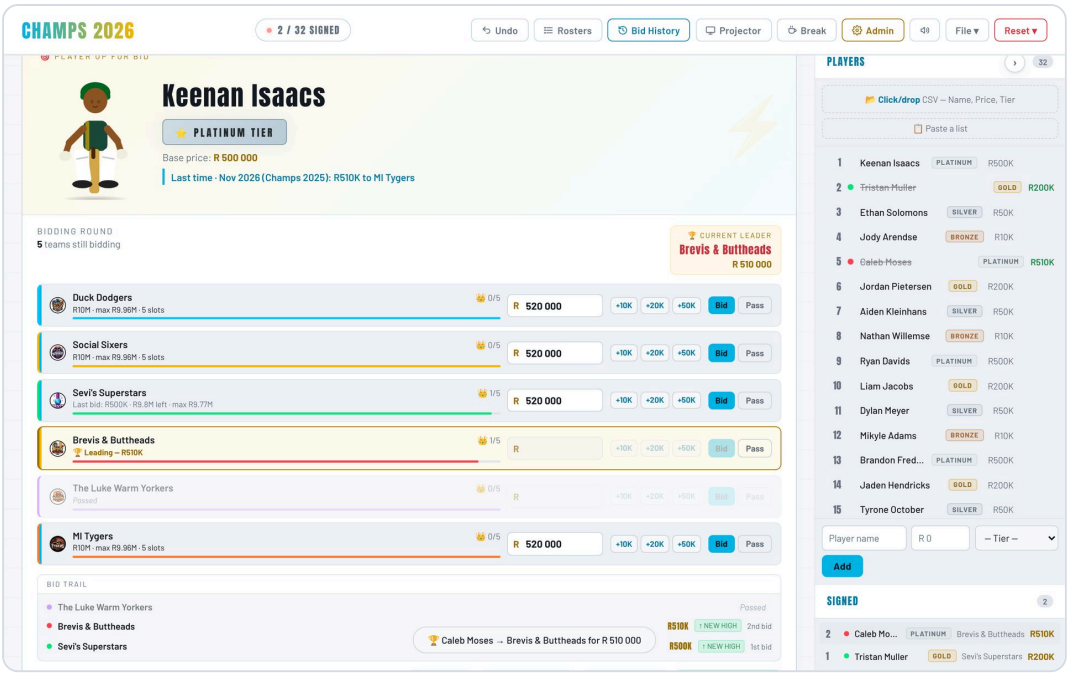

BUTTON	WHAT IT DOES
↶ **Undo**	Takes back the last pick or skip
Skip this team's pick	Moves to the next turn. That team ends the round with one fewer pick
⟲ **Reset this round**	Clears this round's picks (refunding any paid ones) and restarts it. Earlier rounds stay
← **Previous round**	Goes back to the round before, picks intact
Save State	Saves the whole event as a file

ROUND SETTINGS IN PRACTICE

SETTING	EFFECT
Cost: Free	Picks cost nothing; the list shows "Free"
Cost: Listed price	The CSV price comes off the team's budget when picked
Uses squad slots	On: picks count toward "players bought per team". Off: they're extra
Counts toward tier limits	On: a pick in a full tier is blocked, and the pick uses up that tier for the auction too

05 THE AUCTION

A player comes up (by wheel, draw, list order or the auctioneer's pick), every team bids or passes, and the player is sold or set aside.

A bidding round. The player card (with last year's result for a returning player), each team's row with its purse bar, squad, bid box, quick bids and Pass, the leader card, and the pool on the right.

THE SCREEN

- **Top bar:** event name, signed count, then Undo, Rosters, Bid History, Projector, Break, Admin and the sound button (on, projector only, or off). **File ▾** holds Save State, Load State, Rosters PDF, Results image, Team cards, Sold cards, Results CSV and Keyboard shortcuts. **Reset ▾** (red) holds Undo all sales and Reset event, away from the everyday buttons.
- **Team strip:** one card per team, scrolling sideways when there are many: budget left, a budget bar, and the squad (crown = captain, medal = pre-auction pick, then signed/slots). Click a team to open its roster. While a player is up for bid the strip steps aside: each bid row shows the same purse bar and squad, so the player card and bid rows get the room.
- **Centre:** the wheel (or the draw stage) with the big button under it. While the wheel spins the button reads **SKIP ▶▶**; press it, or Space, to jump to the result.
- **Players panel (right):** the pool. Hover a player for ✎ (change name, tier or base price) and ✕ (remove); clicking a price edits just the price. 📋 **Paste a list** adds several at once, and the form at the bottom adds one. **Signed** lists every sale, newest first. The round **›** button at the top of the panel (or **L**) folds the panel to a slim rail so the wheel and bidding get the full width; it stays folded on this computer until you open it again.

RUNNING ONE PLAYER

1. **Load the pool** in the wizard, or into the Players panel by CSV, paste or by hand.
2. **Bring a player up** with the big button (or ▶). The card shows name, tier, base price, the opening bid if the tier minimum is higher, and a cartoon cricketer.

3. **Take bids.** Each team row has an amount box, **Bid**, **Pass**, and quick buttons for **+1**, **+2** and **+5** increments over the leader. Typed amounts accept shortcuts like `350k` and `1.2m`; with "Type bids in thousands" on, `350` means 350 000. With pre-fill on, the box already holds the next valid amount. With purse reserve on, each row shows the team's **max** bid.
4. **Watch the leader card** and the bid trail, where each bid is numbered (1st bid, 2nd bid…). The leading team's box is locked; it can still Pass.
5. **Close the player** with one of these:

HOW IT ENDS	WHAT HAPPENS
🏆 **Declare Winner**	The leader buys the player at their bid
Going once… (G)	"Going once, going twice" on screen and on the projector, about 1.5 seconds each, then sold to the leader. Any new bid cancels it; press again to stop
Auto-sell (if on)	Sold to the leader as soon as no other team can still bid
Every team passes, leader included	Sold to the leader
Nobody bids, everyone passes	Into the unsold queue
✕ Unsold	No sale; into the unsold queue
↩ Back to pool	No sale and not marked unsold, for when the wrong player came up
Timer runs out (if set)	Sold to the leader, or into the unsold queue if nobody bid. ⏸ (or T) pauses the timer and +10 (or +) adds time; the break screen pauses it too

With the unsold queue switched off in the wizard, the button reads ✕ Skip Player and unsold players go straight back into the pool. If no team can bid at all (budgets, squads or tier limits), the round says so: mark the player Unsold.

BID RULES THE APP ENFORCES

CHECK	RULE
Opening bid	At least the higher of the player's base price and their tier's minimum
Later bids	At least leader + increment when "Enforce the increment" is on; otherwise any amount above the leader
Budget	A team can't bid more than it has left
Purse reserve (if on)	A team must keep enough to fill its empty squad slots at the cheapest opening bid, so its max bid is budget minus that. The error says how much it must keep
Greyed-out team	Shows why: Squad full, "2 Platinum already" (tier limit, pre-auction picks included when that round counts), Insufficient funds, or Can't beat the leader

UNSOLD PLAYERS AND THE UNSOLD ROUND

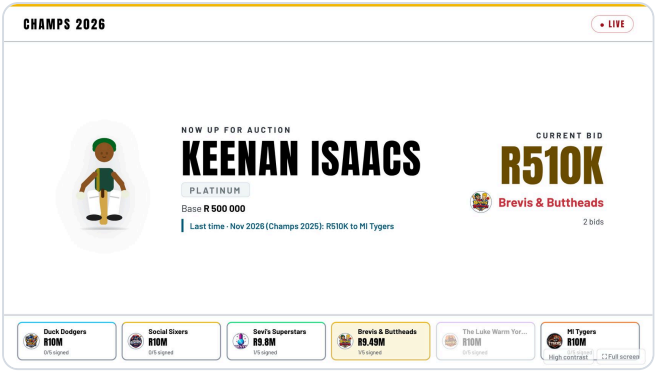

A player nobody buys leaves the draw and waits in an unsold queue, so the main draw never brings them up again. Once the main pool is empty, the queue gets a second auction at a discount.

1. **During the main draw**, queued players stay in the Players list with a red QUEUE tag, and the stage shows how many are waiting. ↩ next to a queued player puts them back in the main pool.
2. **When the main pool runs out**, the stage shows "Main draw done", how many players are unsold, and how many teams still have squad space and budget.
3. **Press START UNSOLD ROUND.** Each queued player's opening bid drops by the wizard's price cut (50% by default); the list shows the old price struck through.
4. **Bid as normal.** Only teams short of players and with enough budget for the reduced opening bid can bid.

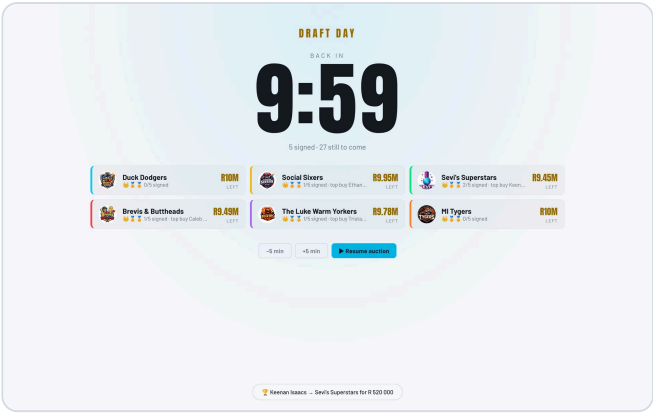

5. **A player unsold again** is tagged UNSOLD and stays off every team. They still appear in the results image's unsold section.

If no team has both squad space and budget when the main draw ends, the stage says the event is complete instead. Sales from the unsold round carry a 2ND ROUND tag in Bid History.

TOOLS FOR THE NIGHT

Projector (P), in high contrast. A second window for the TV: player, current bid, leader, timer and every purse. No controls.

Break (B). A countdown (10 minutes to start, –5 / +5 to adjust) with the standings.

PROJECTOR VIEW

Drag the window onto the TV and press **Full screen** in its corner. It follows the laptop by itself, updating the moment anything changes. For a bright room, **High contrast** (next to Full screen) switches to pure white with black text and heavier lines, and is remembered on this computer.

WHEN	THE ROOM SEES
Between players	How many players are left, signed so far, and the last sale
Spinning or drawing	"Who's next?"
Bidding	The player's name, cartoon, tier and base price; the current bid and leader; the timer if set; the bid count
Just sold	SOLD! with the player, team and price, for about 8 seconds
Going once...	GOING ONCE... then GOING TWICE... beside the bid
Break	The countdown and the standings
Random draw	The drawn player and the team being picked, then the team they join

A sponsor, if set, sits in the header. Along the bottom: every team's purse and squad count. With sound set to **projector only**, the sounds play from the projector window's speakers rather than the laptop's. During bidding the leader is outlined in gold, and teams that passed or can't bid are dimmed. If nothing opens, the browser blocked the pop-up: allow pop-ups for the page and press Projector again.

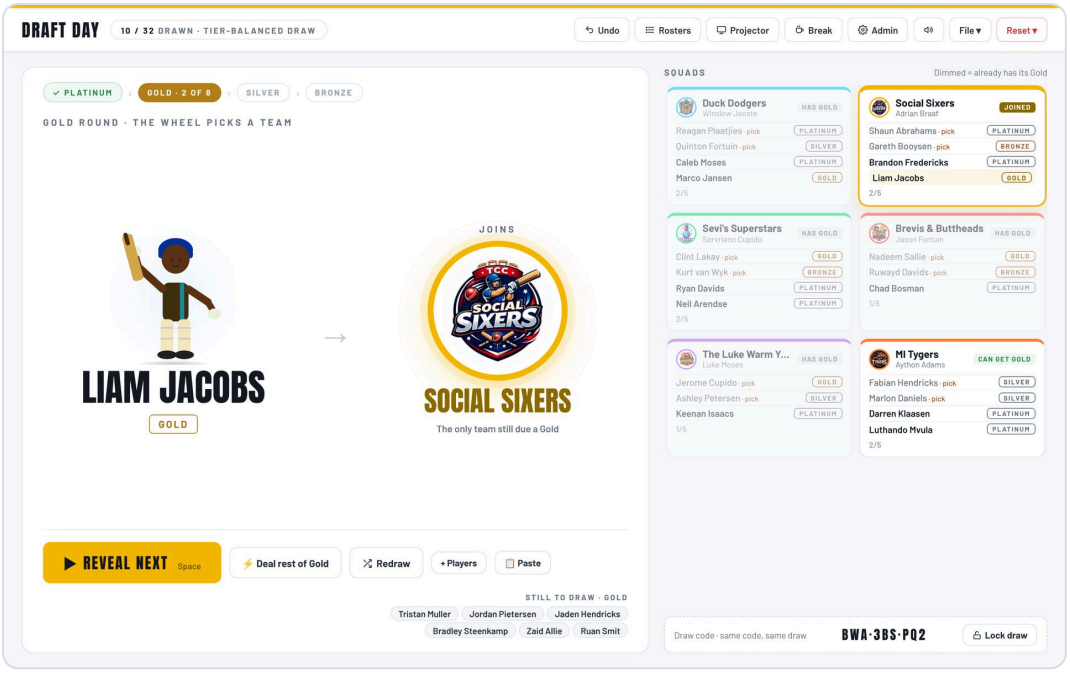

ADMIN, DURING THE EVENT

Admin opens two tabs. **Apply Changes** saves them into the event, so they go into saves and are remembered on this device. Team count, pre-rounds and tier names can only change in the wizard, before launch.

- **Teams:** name, captain, colour and budget left. Renaming a team keeps its bid history attached.
- **Auction Rules:** increment and its enforcement, pre-fill, purse reserve, bids in thousands, auto-sell, timer and restart, players bought per team, the unsold queue and its price cut, and each tier's minimum and limit.

06 RANDOM ALLOCATION

Choose **Random allocation** under Format on the wizard's first step and there's no money and no bidding: the draw shares the players out. Budget, the Bidding step and the unsold settings drop away. Captains, tiers, squad size and pre-auction rounds all still apply, and pre-auction rounds run first as usual.

The draw screen. Tier progress at the top, the drawn player and the team they join in the centre, every squad on the right, the draw code at the bottom.

SETTINGS

SETTING	OPTIONS
Balance by tier	**On** (default): one tier at a time, highest first. Each player goes to a team with the fewest of that tier so far, then the fewest players. Pre-auction picks count toward the balance, and tier limits always apply. **Off**: everyone in one hat; squads stay even in size
How it's revealed	**Live**: player, then team, one at a time. **Instant**: one button deals everyone
Team pick (live)	**Second spin** cycles through the teams still in the hat and lands on one; **Card flip** shows a face-down card that flips over; **Straight in** places the player at once
Reveal length	Quick, normal or dramatic. Pressing Reveal again skips to the result

RUNNING THE DRAW

1. **Load the players** in the wizard, or on the draw screen by CSV or 📋 Paste (the same list as for an auction; the price column is ignored).
2. **Press ▶ Reveal next** (or Space). A player is drawn, then their team. The line under the team shows how fair it was, for example "1 of 2 teams still due a Gold".
3. **Keep going**, or press ⚡ **Deal rest of Gold** to finish the current tier at once. In instant mode there's a single ⚡ **Deal everyone** button. **+ Players** loads another CSV.
4. **Lock the draw** with 🔒 **Lock draw** once you're happy, so nobody can redraw.

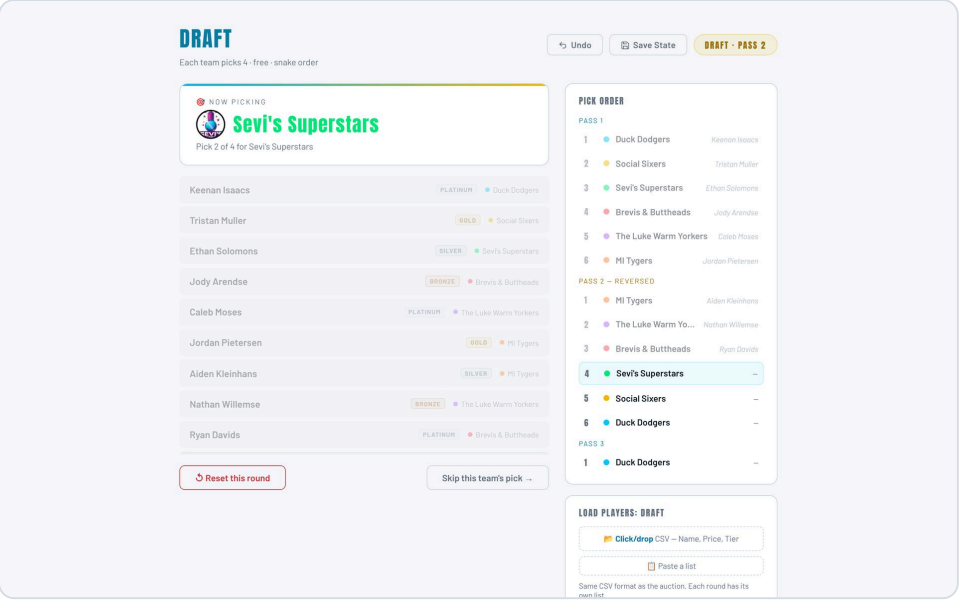

- **Tier strip** along the top: finished tiers ticked, the current one with its count ("Gold · 5 of 7").
- **Squads panel:** teams that already have the current tier are dimmed. While a team is being picked, the teams still in the hat are outlined and nothing gives the answer away until it lands. Click a team to open its roster.
- **Players who can't fit** anywhere (squads full, or tier limits) are listed when the draw is complete.

> **DRAW CODE** The code at the bottom right makes the draw checkable: the same code with the same teams, players and picks always gives the same result. Click the code before the first draw to type one in. ↻ **Redraw** puts everyone back in the hat with a new code; **Reset ▾ → Undo all draws** empties the hat but keeps the code.

Undo, autosave and resume, Save and Load, rosters, the projector, the break screen and every export work as in an auction, showing tiers and draw numbers instead of money. The PDF lists each team's tier mix and draw numbers with the draw code in the footer, team cards show the squad and draw code, and **Drawn cards** replace Sold cards.

07 CAPTAINS' DRAFT

Choose **Captains' draft** on the Format step and there's no money: captains take turns choosing from the pool until every team has its squad. Budgets, bidding and the unsold settings drop away. Captains, tiers and pre-rounds still apply, and pre-rounds run first.

A draft in pass 2. The team on the clock, taken players greyed out with their team, and the snake order with each pick filled in.

SETTINGS

SETTING	WHERE	OPTIONS
Pick order	Format step	**Snake** (1 → n, then n → 1, and so on) or **Straight** (1 → n every pass)
Players picked per team	Event step	How many each captain drafts, not counting the captain or earlier rounds. At least 1
Who picks first	Review step	The pick order list: drag teams, or use the arrows

RUNNING THE DRAFT

1. **Load the pool** in the wizard (Review → Players → Draft pool), or on the draft screen by CSV or 📋 Paste.
2. **The "Now picking" card** names the team on the clock and which pick this is. The captain says a name; click that player.
3. **Blocked players** show why in red, for example a tier the team already has its limit of. **Skip this team's pick** passes the turn; Undo takes back the last pick.
4. **When the last pick is in**, the green banner says **Draft complete** and offers **Rosters PDF**, **Results image**, **Team cards** and **Results CSV**. **See all squads** opens the rosters.

Anyone not picked is listed as **Not picked** in the PDF, the results image and the CSV. The recap (chapter 9) names the first and last picks. Save State, autosave and resume all work mid-draft.

08 FIXING MISTAKES

For the last thing you did, ↶ **Undo** (or `Ctrl` / `⌘` + `Z`) is quickest. For anything older, open the team's roster.

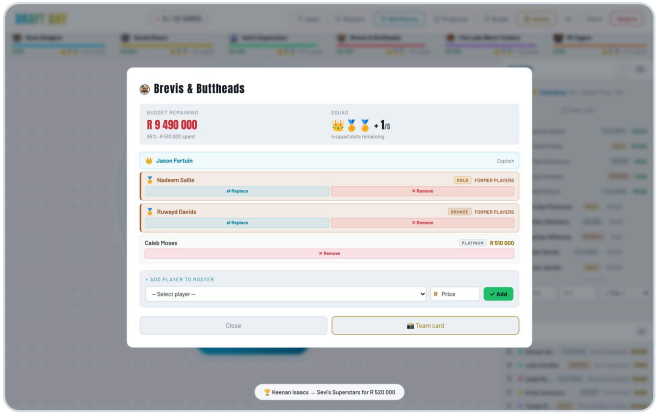

UNDO

Undo reverses the last action: a bid, a pass, a sale, an unsold mark, a pick or skip, a draw, an edit to a player, or a roster fix, and brings back the bid trail too. Hover the button to see what it will undo. It keeps the last 60 actions for the current screen; launching the auction or draw starts a fresh list.

FIXING A PLAYER IN THE POOL

A typo in a name, the wrong tier or the wrong base price: hover the player in the Players panel and press ✎. Change any of the three and press Save. It's not available while that player is up for bid.

ROSTER FIXES

One team's roster. Replace and Remove on pre-auction picks, Remove on signings, Add player at the bottom.

Rosters shows every team; clicking a team in the strip (or on the draw screen) opens just that team.

ACTION	WHAT HAPPENS
✕ Remove	On a signing: full refund, and the player goes back in the pool
+ Add player	Pick an unsold player and a price (at least the opening bid). Squad and tier limits apply. No price in a random draw
⇄ Replace	On a pre-auction pick: choose an unpicked player from the same round. In a paid round the team pays or gets back the difference
✕ Remove (pick)	Refunds what the pick cost and frees the player in that round's list

- Captains can't be removed here; change them in **Admin** → **Teams**.
- Replace and Remove are blocked if they'd break a tier limit or the team can't afford it.
- Removed and added players update the Signed list and the results CSV. A removed player's bid trail isn't kept.

THE TWO RESETS

Both are under **Reset ▾** and ask before doing anything. Save State first if you might want the old state back.

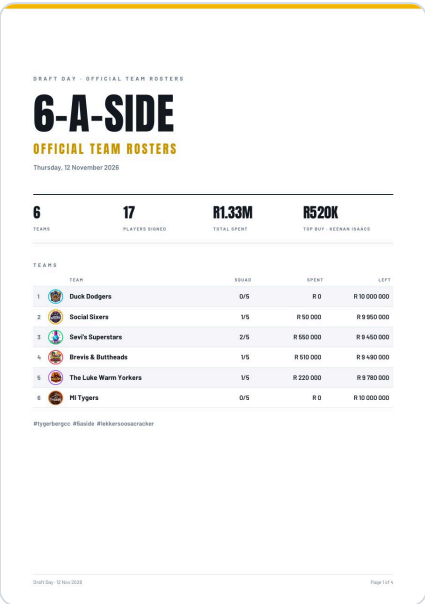

BUTTON	WHAT IT CLEARS
↺ Undo all sales / draws	Every auction sale (budgets refunded, players back in the pool, bid history wiped) or every draw. Captains and pre-auction picks stay
✕ Reset event	Rosters, picks and sales; goes back to the wizard's Review step. The event settings stay

09 RESULTS, EXPORTS AND SAVING

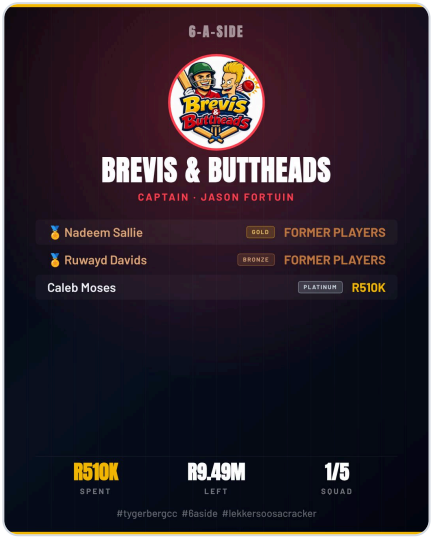

Everything is under **File ▾**. File names start with the event name, shown here as `<event>`.

OUTPUTS

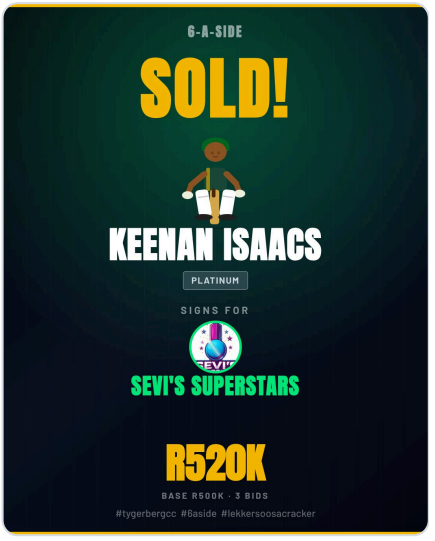

OUTPUT	WHAT YOU GET
Rosters PDF	`<event>-rosters.pdf` : a light, print-friendly A4 document. A cover with the title, date, key numbers, a teams table and (when it fits) the players not signed; then the squads, about three teams to a page, with logo, captain, spent, left and squad, and every player's tier and price
Results image	`<event>-rosters.png` : every squad plus unsold players. **Full** is one tall image; **Square** (1080×1080, 4 teams a page), **Portrait** (1080×1350, 6) and **Story** (1080×1920, 8) split into pages when there are more teams. ‹ › flips through them; Download saves them all
Team cards	`<event>-team-<team>.png` : one 1080×1350 post per team. Also from 📸 Team card at the bottom of a team's roster
Sold cards	`<event>-sold-<nn>-<player>.png` : one 1080×1350 post per signing, opening on the newest (Drawn cards in a random draw; not offered for a draft)
Recap	`<event>-recap.png` (Image: Recap), and the last page of the Rosters PDF: the day in numbers plus up to five highlights. Auction: top buy, biggest bidding war, bargain of the day, biggest spenders, most left in the bank. Draw: first and last out of the hat. Draft: first and last pick
Results CSV	`<event>-results.csv` : one row per player on every team (Team, Player, Tier, How they joined, and Base price and Paid in an auction or Draw # in a draw), then everyone not placed. Opens cleanly in Excel

Rosters PDF, cover.

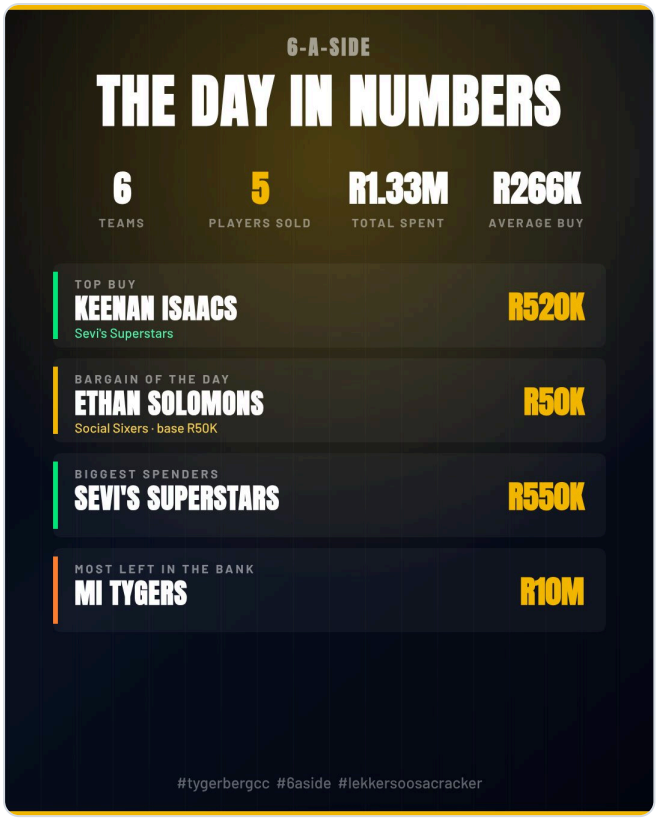

Team card.

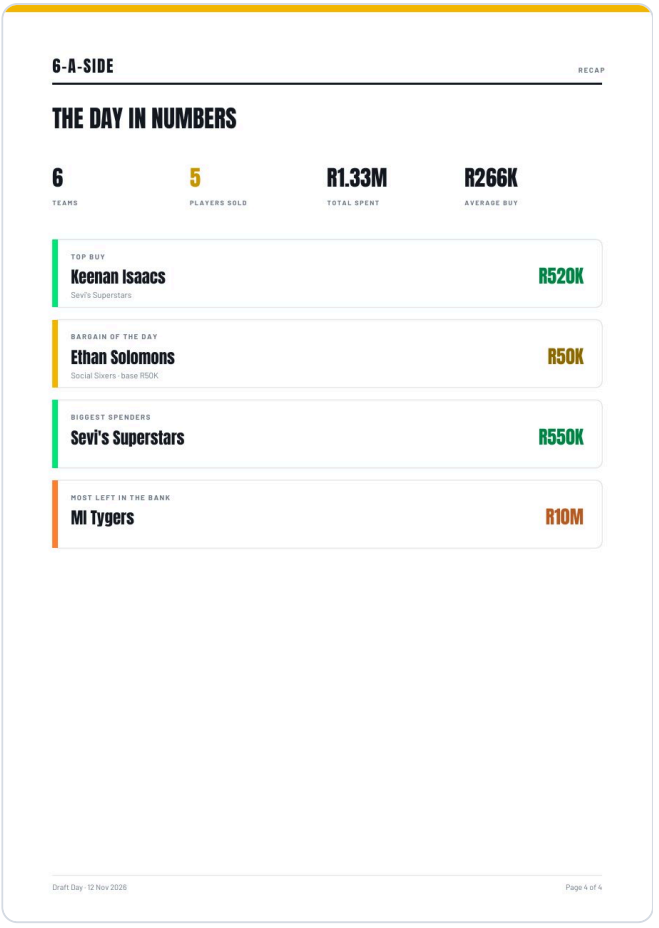

Sold card.

RECAP AND SPONSOR

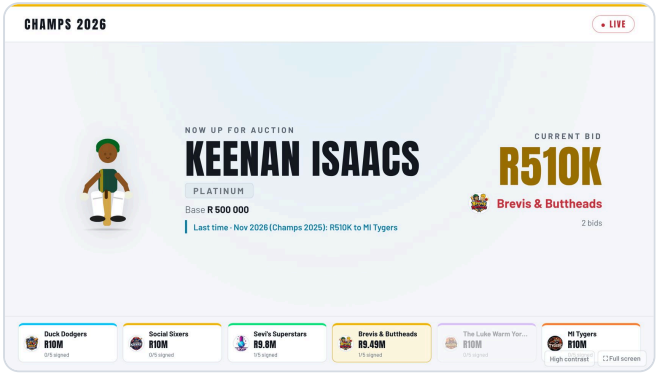

Recap card, with a sponsor along the foot.

Rosters PDF, recap page.

Sponsor. Set one on Review → Outputs: a name, the line before it ("Presented by") and an optional logo. Leave the name blank for none. It appears in the projector header, along the foot of every card and the results image, top right of the PDF cover and in each PDF page footer.

PLAYER HISTORY

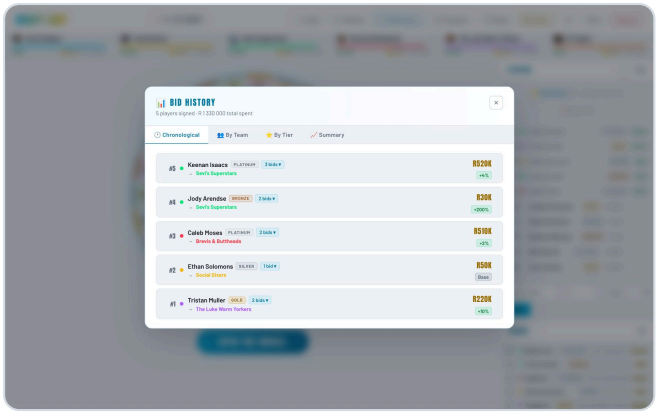

Projector, with a returning player's last result under the base price.

Every event remembers where each player went and for how much, on this computer. When a returning player comes up, the player card and the projector show their last event, for example **Last time · Nov 2025 (Champs 2025): R510K to MI Tygers**. Hover a player in the pool or on a pick screen for the same line. It gives the room something to talk about and helps set base prices.

History follows the rosters as they stand, so undo and roster fixes keep it right; rehearsals are never recorded. On the Review step, **Player history** lists the earlier events: ✕ removes one, and ⬇ **Export history** / ⬆ **Import history** move it to another computer.

BID HISTORY

Bid History, Chronological tab.

TAB	SHOWS
Chronological	Every sale, newest first, with price and markup over base. Click "n bids" for that player's bid trail
By Team	Each team's buys, total spent and budget left
By Tier	Sales grouped by tier (hidden with no tiers)
Summary	Players signed, total spend, highest bid, biggest spender, best value, most overbid, and spend by team

SAVING

- **Autosave** keeps the whole event in this browser after every change and every 15 seconds. If the tab closes or the laptop crashes, open the app again: the wizard shows **Event in progress** with ▶ Resume or Discard. Reset event clears it.
- **Save State** downloads `<event>-save-<date-time>.json`: every setting, team, player, roster, budget, the bid log and pre-auction progress.
- **Load State** (or **Resume save** in the wizard) reopens a save on the right screen: wizard, a pre-auction round, the auction or the draw.
- Saves from the old fixed-format version still load, as a 6-team event with one 2-pick former-players round.

> **BACKUP** Autosave lives on one laptop only. Save State at the breaks gives you a file you can open on another machine if this one dies.

10 ON THE NIGHT

CHECKLIST

THE DAY BEFORE

- [ ] Wizard settings checked on the Review step; preset saved and exported
- [ ] Player CSVs ready: one per pre-auction round, plus the pool
- [ ] Tier names in the CSVs match the wizard's tiers
- [ ] Logos in `logos/`, or uploaded in the wizard
- [ ] A practice run with ▶ **Rehearse** on the Review step (below)

AT THE VENUE

- [ ] Laptop on charge; the app served from a local server if possible
- [ ] Projector open on the TV, in full screen (High contrast if the room is bright)
- [ ] Pop-ups and multiple downloads allowed for the page
- [ ] Lists loaded in the wizard (or ready to load as each round starts), then Launch
- [ ] Sound set: on, projector only, or off

DURING AND AFTER

- [ ] Save State at each break
- [ ] Lock the draw once it's done (random allocation)
- [ ] File ▾ → Rosters PDF, team cards and the results CSV
- [ ] A final Save State, kept with the results

KEYBOARD SHORTCUTS

File ▾ → Keyboard shortcuts (or `?`) shows these on screen. Keys are ignored while typing in a box.

KEY	DOES
Space	Spin or draw the next player; press again to skip. In a random draw: reveal next
1 – **9**, **0**	Quick bid (+1 increment) for team 1–10
Shift + number	Pass for that team
G	Going once, going twice… (again to stop)
D	Declare winner
U	Unsold
R	Back to pool
T	Pause / resume the bid timer
+	Add 10 seconds to the bid timer
B	Break screen
P	Projector window
S	Sound on / projector only / off
L	Show / hide the player list
Ctrl / **⌘** + **Z**	Undo last action
Esc	Close the open panel
?	Show this list

REHEARSE

▶ **Rehearse** on the Review step runs the whole event with your loaded lists, or with made-up players if none are loaded. A yellow **REHEARSAL · NOTHING IS SAVED** tag stays on screen: nothing is autosaved, and a real event saved earlier is left untouched. Try the projector, a few sales or draws and the exports, then **Reset ▾ → Reset event** to go back to setup.

> **ACCESSIBILITY** Every button can be reached with Tab and shows a clear focus ring; pop-ups take focus when they open and hand it back when they close; messages are read out by screen readers. If the laptop is set to reduce motion, spins and reveals are cut to under a second and the confetti is skipped.
